

## Menda Bottles Meet State Board Rules

Menda's printed bottles present a professional look in the salon while clearly identifying the product inside, making them ideal for satisfying state board requirements. The bottles feature stainless steel pumps that are made in the U.S. and guaranteed not to clog or leak. Just press down and product is pumped up, leaving one hand free. Since there is no need to remove the cap, they also prevent spills and help reduce odors in the salon.

The 4-ounce bottle marked "Acrylic" has a Pure Touch Pump. The lid can be used as a dappen dish since this pump does not allow product to drip back into the bottle, preventing acrylic powder from contaminating the liquid. The other two bottles — a 6-ounce "Acetone" and 8-ounce "Alcohol" — feature the One Touch Pump. Fluid is pumped right up into the cotton ball or swab for easy, one-hand application.
